# Home, Sweet Home

IN THE HISTORY of our country, the words "Home, Sweet Home" have never meant quite what they mean today. The aftermath of a world-wide struggle finds us without many, many things that we formerly took for granted. The situation is universal. No one has escaped it.

A few moments of reflection brings to one and all a sincere appreciation of what a piece of land and a shelter thereon represents to those fortunate enough to have one. Is it not logical, therefore, that under such conditions we should bend every effort to make the homes we have more livable and more abundantly fruitful of happiness for ourselves and for others?

Purchased diversion is a common form of individual selfishness. Those who carry it too far miss much in life. The greater fun and richer life that comes from creating our own relaxation is the reason why so many of us wisely give in to our hobbies, and often become creative producers.

It is not our purpose to decry the many forms of relaxation that call for a direct outlay and that are merely a memory a few hours later. Within limits, such outlays are beyond criticism, but having spoken of hobbies as being worthwhile, we do want to emphasize gardening "as the greatest hobby of them all."

You can buy vegetables and fruits at a market; you can buy flowers from a florist; and you can sometimes, but by no means always, buy health from a doctor, but in a garden where you are outdoors in the fresh air and the sunshine, you can preserve your health which is, after all, your most precious possession, and you can grow better vegetables, fruits and flowers than you can buy. There is another point—almost regardless of how much you spend on your garden, you can still save money! How? Because you don't spend it foolishly elsewhere!

Think it over! Also remember, there is no place like home—your piece of land and the shelter thereon.

Use one pound to 250 square feet

For many years "Boston Park" has been our standard recommendation to those who wish the best in lawn grass seed mixtures and for years its reputation as a quality lawn builder has grown. The experience of five generations of New England seedsmen has been used in the blending of this superb mixture of choice grasses, each of which has survived the test of the most rigorous cold as well as the opposite extremes of Summer weather. "Boston Park" is designed to provide the kind of lawn that everybody wants; one that starts green in the Spring and stays green throughout the season. Guaranteed to contain no crabgrass seed.

Due to popular demand no Clover is included in this mixture.

## Breck's SHADY SPOT

FOR SUNLESS SITUATIONS      Lb.      5 lbs. \$6.40, 10 lbs. \$12.25  
\$1.35      25 lbs. \$28.75, 100 lbs. \$110.00

Prepaid anywhere in U. S. A.

Use one pound to 250 square feet

A companion to Breck's Boston Park Lawn Seed Mixture and designed to blend perfectly with it. It is adapted to those places which have little or no direct sunshine. The component grasses are all of the highest quality. They have been chosen for their ability to withstand climatic extremes and because they will thrive in shady places where other grasses will not grow. Guaranteed to contain no crabgrass seed.

## Breck's BACK YARD

WITHSTANDS WEAR and TEAR      Lb.      5 lbs. \$4.00, 10 lbs. \$7.60  
85¢      25 lbs. \$18.00, 100 lbs. \$68.00

Prepaid anywhere in U. S. A.

Use one pound to 250 square feet

This mixture of grasses is planned particularly to form a sod which will stand very hard usage and still prove permanent. It will make a strong, rapid growth and the roots will strike deep into the soil, thus providing a thick, green turf which will not suffer from rapid drying out in very dry weather. An ideal mixture for playgrounds too; no Clover is included.

## Breck's BANK and TERRACE

FOR STEEP SLOPING AREAS      Lb.      5 lbs. \$4.75, 10 lbs. \$9.00  
\$1.00      25 lbs. \$21.00, 100 lbs. \$80.00

Prepaid anywhere in U. S. A.

Use one pound to 250 square feet

Banks and terraces are often a part of the lawn surface around a house. For such sloping areas it is necessary to use a Lawn Seed Mixture that contains grasses which establish themselves quickly and with root systems that will not only support the grass plants, but also insure the sloping ground against erosion. The grasses used in Bank and Terrace Mixture will meet all conditions of drought and torrential rain.

## Breck's VELTURF

FOR SUPER-DELUXE LAWNS      Lb.      5 lbs. \$6.40, 10 lbs. \$12.25  
\$1.35      25 lbs. \$28.75, 100 lbs. \$110.00

Prepaid anywhere in U. S. A.

Use one pound to 250 square feet

The finest mixture of quality grasses for the home lawn that money can buy. It is made up of fast growing varieties which will start quickly and produce a fine close lawn within a few weeks, together with such permanent grasses as Colonial Bent and Chewing's Fescue which gradually replace the former to form a turf which will last for years, if given reasonable care. This permanent lawn will have a fine even texture of the richest green color; it will stand the severest cold of Winter and withstand the heat of Summer. Breck's "Velturf" is guaranteed to contain no crabgrass seed and because of the luxuriant close textured turf when established crabgrass has little chance for survival. We recommend this grand grass seed mixture highly.

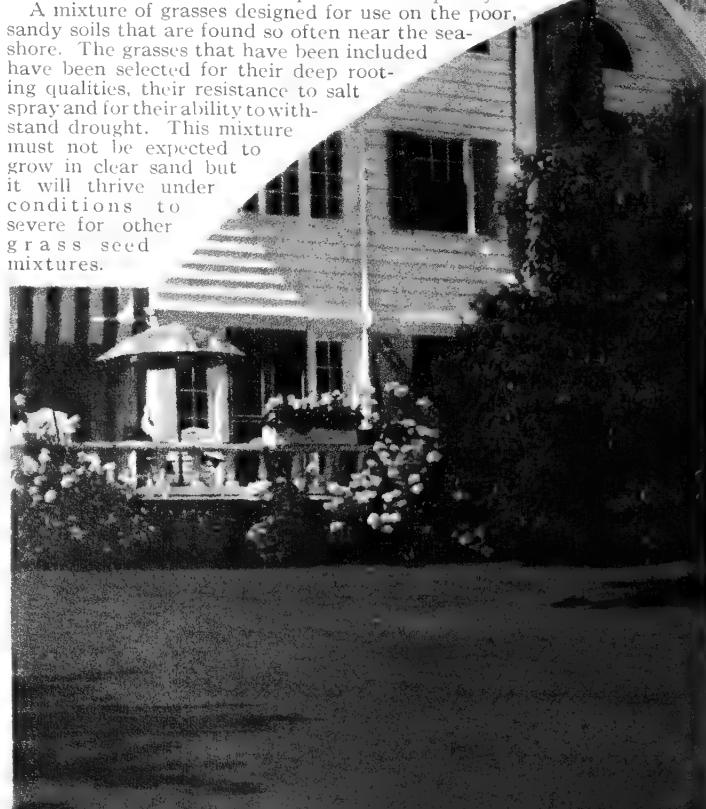

## Breck's SEASHORE

FOR LOOSE SANDY SOILS      Lb.      5 lbs. \$4.75, 10 lbs. \$9.00  
\$1.00      25 lbs. \$21.00, 100 lbs. \$80.00

Prepaid anywhere in U. S. A.

Use one pound to 250 square feet

A mixture of grasses designed for use on the poor, sandy soils that are found so often near the seashore. The grasses that have been included have been selected for their deep rooting qualities, their resistance to salt spray and for their ability to withstand drought. This mixture must not be expected to grow in clear sand but it will thrive under conditions to severe for other grass seed mixtures.

# Agricultural Seeds, Grains, etc.

## CLOVERS and FIELD SEEDS

**BUCKWHEAT.** The largest and best variety. It is grown extensively as an article of food, but is also used as a quick growing cover crop for turning in to improve soils. 1 lb. will sow 200 square feet. 1½ bushels to an acre.

Not prepaid, 12 lbs. \$1.75, 24 lbs. \$3.25, 48 lbs. (bu.) \$6.00

**CLOVER, Alsike** (*Trifolium hybridum*). A very hardy perennial Clover, valuable as a forage crop and for soil improvement. Alsike is often sown with Timothy and Red Clover to be used as hay, and produces a crop of superior quality. It is very free flowering and attractive to bees.

Prices unsettled. Ask for quotation

**CLOVER, Bokhara** or **White Sweet** (*Melilotus alba*). An excellent legume for plowing under as a green manure. If cut before it becomes too coarse, it makes very satisfactory hay. Although not relished by livestock as much as Alfalfa, it will grow on soils much too poor for Alfalfa. Valuable crop for beekeepers. Not suitable for lawns.

Prices unsettled. Ask for quotation

**CLOVER, Ladino White.** A mammoth white Clover from the Pacific Northwest hardy in New England. Valuable in any pasture, or for permanent mowing. Not for lawns.

Prepaid, 1b. \$3.50, 5 lbs. \$16.50, 10 lbs. \$31.50

**CLOVER, Medium Red** (*Trifolium pratense*). This is the common Red Clover and by far the most important variety. It may be sown alone or in combination with various other forage plants. A highly nutritive forage crop and valuable too for plowing under to improve soils. It will grow on a wide variety of soils, but will not tolerate poorly drained land.

Prices unsettled. Ask for quotation

**CLOVER, White Dutch** (*Trifolium repens*). This is the Clover which has been used so widely in lawn grass mixtures. It will grow in a great variety of soils, but is most luxuriant on alkaline soils where it receives plenty of moisture. White Clover is also a splendid pasture plant and because of its high nutritive value the hay is very desirable for cattle.

**Lawn and Field Grasses**

**BENT, Colonial** (*Agrostis tenuis*). An Oregon-grown strain of Colonial or Rhode Island Bent. This grass produces a luxuriant, heavy and very firm turf when it is maintained as a putting green. It is of fine texture, hardy, and well adapted to New England soils and conditions; very resistant to disease. Desirable as a golf putting green grass and as an important lawn seed mixture ingredient.

**FESCUE, Chewing's** (*Festuca rubra var. fallax*). An excellent, fine leaved, fast-spreading grass which will withstand drought and will thrive on loose, sandy soils which are of a somewhat acid nature. Chewing's Fescue will also do very well in most types of soil, in sun or shade. It is at its best in a mixture with other grasses and should be in all good lawn mixtures but never sown alone.

**FESCUE, Creeping Red** (*Festuca rubra*). Certified Genuine Olds Strain. An excellent fine leaved grass of creeping habit which makes a beautiful turf when combined with other grasses. Valuable in mixtures for shade.

**KENTUCKY BLUEGRASS** (*Poa pratensis*). A very valuable grass for lawns and permanent pastures on soils that are fairly rich and which have an alkaline reaction. Kentucky Bluegrass germinates and matures slowly and the resulting turf is not fully developed until it is two years old. (It does not reach perfection as a pasture grass until it is at least four years old.) For lawns, combine it with other varieties which develop more quickly but which are gradually crowded out by this long-lived grass.

**ORCHARD GRASS** (*Dactylis glomerata*). An excellent, fibrous-rooted perennial grass which thrives well on light, sandy soils. Particularly valuable on hilly pastures that wash badly, where its roots when established penetrate deeply, preventing erosion. Withstands droughts better than most species. Not desirable for lawn purposes, but an excellent pasture grass; makes excellent hay when combined with Red Clover.

**RED TOP** (*Agrostis alba*). An important grass for both lawn and agricultural purposes. Will thrive under a wide range of conditions. In lawn seed mixtures it is used solely as a nurse crop to be replaced by slower growing but more permanent grasses. Often sown with Timothy and Red Clover for pasture purposes. Fancy Prepaid, Lb. \$1.75, 5 lbs. \$8.25, 10 lbs. \$15.75, 25 lbs. \$31.50

**RYEGRASS, Domestic** (*Lolium Species*). A mixture of Perennial and Italian Ryegrasses grown in the Pacific Northwest. It does not produce a permanent turf and should never be sown alone, but it is a valuable nurse grass because of its rapid growth for both lawn and pasture.

**RYEGRASS, Perennial** (*Lolium perenne*). A quick germinating and rapid growing variety much used as a nurse grass for slower developing sorts in lawn seed mixtures; valuable for hay or pasture. Perennial Ryegrass is seldom used alone but is sown in combination with other grasses for either lawn or field use.

**TIMOTHY (Herd's Grass)** (*Phleum pratense*). A valuable grass for hay thriving best on moist, loamy soils of medium texture. Under favorable conditions it will yield 3 to 4 tons of best quality hay per acre. Not to be used in good lawn mixtures. Weight, 45 lbs. per bushel. Prepaid, 1b. 20c., 5 lbs. 95c., 10 lbs. \$1.65, 50 lbs. \$7.75—In lots from 60 to 100 lbs., 13½c. per lb.

**Ask for Prices  
on other Field Seeds**

**WHEAT, Thatcher Spring.** Wheat is, of course, the grain that is most largely used in the manufacture of products for human consumption. It is also of value as a feed for livestock, but in our section of the country it is grown for hay, for its straw which is used for bedding livestock, and for a green manure crop. This variety is a heavy cropping type for Spring planting. The kernel is dark red, hard, and plump. It is beardless, with smooth yellow chaff, and it is particularly valuable because of its earliness. Sow at the rate of 1 lb. to 200 square feet, or 2 bushels to the acre.

Not prepaid, 15 lbs. (pk.) \$1.75, 30 lbs. \$3.25, 60 lbs. (bu.) \$6.00

## VEGETABLE PLANTING CHART

In order to simplify the planning of your garden and so that you may have your seed requirements on hand in good season, we have prepared the following vegetable planting table. The dates given must by necessity be approximate for weather conditions vary so from year to year that hard and fast rules in regard to times of planting are impossible. However, unless the season is unusually late they may be followed with reasonable assurance of safety. Our estimates on the number of plants or the length of row that an ounce or a pound of seed will produce, are moderate. In many cases many more plants will result and if great care is taken in handling, the seed will sow a row longer than that specified. • In spite of variations such as are mentioned above we believe that you will find this chart helpful.

# BRECK'S VEGETABLE SEEDS

**Underlined items are those which we particularly recommend**

Asparagus—Mary Washington

## ASPARAGUS

Asparagus is a hardy perennial plant which will bear a satisfactory crop over a 20-year period if the bed is properly established and cared for. We recommend the purchase of ASPARAGUS ROOTS (offered below) rather than seeds for the fussy work of starting, transplanting and selection are thus eliminated and above all, a crop may be harvested at least 2 years earlier.

If seed is used sow it thinly in drills, in the early Spring and cover to a depth of only  $\frac{1}{2}$  inch. The resulting plants should be thinned out to stand at least 6 inches apart and when a year old transplant them to carefully prepared and heavily enriched beds.

*1 ounce of seed will sow about 60 feet of drill*

**5012 Paradise.** A fine new variety that produces a normal crop a year earlier than "Washington," with a heavier yield. Delicious, mild flavored, tender green stalks. Pkt. 25c., oz. \$1.00

**5015 Mary Washington.** The stalks are dark green with purplish tips. Very large, straight, and of superb quality. Immune to rust. Pkt. 15c., oz. 50c.,  $\frac{1}{4}$  lb. \$1.50

## BEANS

**Time to Plant**—Seed of BUSH SNAP BEANS may be sown about May 1 with later plantings until about August 1; DWARF SHELL BEANS from May 1 to about June 20 and POLE SNAP BEANS from May 1 to July 5. LIMA BEANS should not be planted before May 15 with later plantings of the Bush varieties until about June 20 and until about June 10 with the Pole varieties.

**Planting**—Plant BUSH BEANS in rows about  $2\frac{1}{2}$  feet apart and cover the seed to a depth of about  $\frac{1}{2}$  inch. POLE BEANS should be planted in hills with a stout pole, 6 feet or more tall in the center of each hill. These hills should be arranged in rows and spaced about 2 feet apart in the row. Leave about 4 feet between the rows to admit plenty of air and light. Two or three plants should be allowed to each pole. **1 pound of BUSH BEANS will sow a row of about 50 feet; 1 lb. of POLE BEANS (except Limas), will plant about 200 hills; and 1 lb. of LIMAS, about 75 hills**

# BEETS

**Time to Plant**—Sow quite early in the Spring (about April 20) and at intervals, from then until about July 25.

**Soil Preparation**—A light, rich soil is best. Do not use fresh manure for it will cause the roots to become scabby. Old, well rotted manure well mixed with the soil is excellent; also a standard vegetable fertilizer with a high potash content.

**Planting**—Sow the seed thinly in rows and later thin out so that the plants will stand about 2 inches apart. Allow about  $1\frac{1}{2}$  feet of space between rows.

*1 ounce of seed should sow a 50-foot row*

**5272 Crosby's Egyptian, Breck's Arlington Strain.** 50 to 55 days. This strain is unequalled for its fine shape, color and quality. The roots are uniform in appearance with small tops and slender tap-roots. For table use, and therefore for growing in the home garden, we recommend it unreservedly.

Pkt. 15c.,  $\frac{1}{2}$  oz. 30c., oz. 50c.,  $\frac{1}{4}$  lb. \$1.50, lb. \$4.50

**5274 Early Wonder.** 49 to 52 days. Has a small top and therefore is an excellent Beet for bunching. Roots somewhat top-shaped of uniform color and good quality.

Pkt. 10c.,  $\frac{1}{2}$  oz. 20c., oz. 35c.,  $\frac{1}{4}$  lb. \$1.00

**5279 Breck's Beets All.** 60 days. Generally considered an excellent all-round early or main crop Beet for the home garden and general planting. The tops are small, upright in growth; leaves dark green, shaded with red; color uniformly deep red; flesh, a vermillion-red zoned with a slightly lighter shade of same color.

## HERBS for Flavor and Fragrance

8123 **Anise** (Annual). A nice appearing plant with finely divided foliage somewhat resembling Fennel. The tiny yellowish white flowers borne in lacy umbels, appear about 3 months after seed is sown and the seeds are ready for harvesting about one month later. These seeds are used for flavoring many foods such as soups, salads or breads, and also produce an oil which is used in cough medicines.

Pkt. 15c., 3 pkts. 35c.

8145 **Sweet Basil** (Treat as Annual). An easily grown and popular culinary herb; a branching plant which bears whorls of greenish white flowers well above the smooth green leaves. The leaves are delightfully Clove-scented and may be used either fresh or dried for seasoning soups, salads and cottage cheese; also in chopped meats and sausages. Basil has been in use for over 1000 years.

Pkt. 15c., 3 pkts. 35c.

8156 **Borage** (Annual). Pretty sky-blue flowers in clusters on branching plants with somewhat rough, hairy foliage. The young leaves, before the plants bloom, may be cooked like Spinach and the fresh foliage which has a Cucumber flavor adds a cooling touch to salads.

Pkt. 15c., 3 pkts. 35c.

8167 **Caraway** (Hardy Biennial). Caraway is an attractive plant with feathery green leaves and umbels of yellowish white flowers. It is valuable because the foliage may be used in soups and salads; the roots boiled and eaten as a vegetable and the seeds are popular for flavoring.

Pkt. 15c., 3 pkts. 35c.

8189 **Coriander** (Annual). A slender branching plant which bears rose-tinted blooms which resemble "Queen Anne's Lace." Coriander is grown for its seeds which when ripe have a pleasant, pungent flavor and are used in flavoring cookies, cakes, poultry stuffings, sausages and confectionery. Sow where the plants are to grow; transplanting is difficult.

Pkt. 15c., 3 pkts. 35c.

8191 **Dill** (Annual). Fine cut, feathery foliage and umbels of greenish yellow flowers. An aromatic oil from the seeds is used in soaps and perfumes; the foliage flavors meat gravy, cottage cheese or potato salad and the seeds are used in pickles. Dill dislikes transplanting; sow where the plants are to grow.

Pkt. 10c., 3 pkts. 25c.

8224 **Horehound** (Perennial). An old-time sweet herb the name of which is only known to many from its use in cough medicines and hard candy. Horehound is an aromatic plant with woolly white foliage and bristly whorls of white flowers, in Summer. The dried leaves are the useful part.

Pkt. 25c., 3 pkts. 60c.

8246 **Lavender** (Perennial). While Lavender is a perennial, it is best to give the plants Winter protection. It is strongly aromatic and very ornamental being much used in borders and rock gardens. The flowers are lavender and the foliage gray. Grown also for its aromatic oil which is well known in perfumes.

Pkt. 25c., 3 pkts. 60c.

8257 **Marjoram, Sweet** (Treat as Annual). A perennial plant but best treated as an annual because it is not reliably hardy. Small but erect, bearing close heads of purplish blooms. The deliciously fragrant foliage is popular for scent bags and in powders, and the fresh leaves are much used in salads. Dried they may be used for seasoning meats, poultry or cheeses.

Pkt. 25c., 3 pkts. 60c.

8318 **Sage** (Hardy Perennial). A purple-flowered sub-shrub with woolly whitish foliage. The fresh leaves may be chopped and used for flavoring sausage, cottage cheese or pickles. Dried and powdered they are used for sprinkling on roasted meats, in poultry stuffings and with certain cooked vegetables.

Pkt. 25c., 3 pkts. 60c.

8329 **Savory, Summer** (Annual). A fragrant little plant with slender leaves and pale lilac flowers. About flowering time the entire plant is cut and dried and the leaves are then used for flavoring salads, meats, stuffings and cooked vegetables.

Pkt. 15c., 3 pkts. 35c.

8367 **Thyme** (Hardy Perennial). An erect little shrubby plant with small, grayish green leaves closely set on small, wiry stems, and lavender flowers. Used for ornamental purposes in borders or rock gardens. The fresh tops are often used for garnishing and the leaves either dried or fresh, are chopped and used for flavoring a wide variety of cooked foods.

Pkt. 25c., 3 pkts. 60c.

## EGGPLANTS

Eggplant is one of the most tender vegetables and cannot stand outdoor conditions during early Spring. The seeds should be sown about the end of March in a greenhouse or hotbed. Broadcast the seeds over the surface of flats filled with well pulverized soil of good quality and cover with no more than  $\frac{1}{8}$  inch of finely sifted loam. As soon as the seedlings are large enough to handle thin out or transplant so that they stand 6 to 8 inches apart. When outdoor conditions become settled and warm (from about June 5 to 15) the plants should be set in the garden spaced about 3 feet apart.

# PEPPERS

**Time to Plant**—For an early crop the seed may be sown either in the house or in a coldframe in early April. However, seed sown from May 15 to June 1 in the open ground will produce a crop in late Summer.

**Seed Sowing**—Sow the seeds thinly in flats or in a coldframe in light pulverized soil. Cover them with not over  $\frac{1}{4}$  inch of soil.

**Soil Preparation**—Any reasonably good, well cultivated garden soil, preferably ground that has been manured the previous year. Soil too rich in nitrogen will tend toward the production of foliage rather than fruit.

**Transplanting**—Seedlings started inside, should be transplanted as soon as they are large enough to handle, into boxes or individual pots and spaced far enough apart so that each will have ample space for development. These plants should be gradually hardened off by exposure to out-of-door conditions during favorable weather, before being permanently placed in the garden, about June 1. Set the plants  $1\frac{1}{2}$  feet apart in rows leaving about 3 feet between the rows.

# PARSLEY

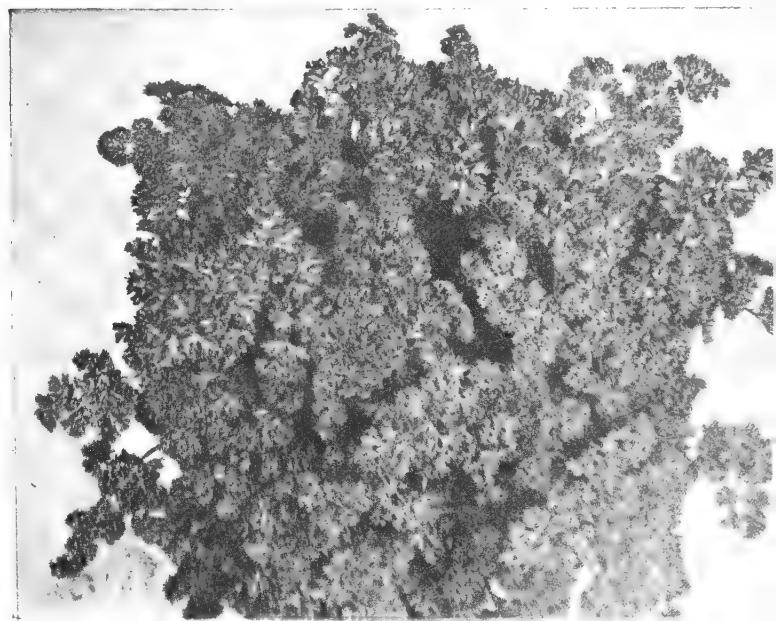

The seed may be sown from April 20 to about June 25 out of doors but if earlier plants are desired they should be started indoors or in a coldframe about March 15 and transferred to the open garden about May 1. The seeds germinate slowly, and care should be taken to press the soil firmly around them. Sow in rows  $1\frac{1}{2}$  feet apart and cover the seed not more than  $\frac{1}{4}$  inch. When large enough to handle thin out to 2 inches apart. Any reasonably good garden soil will suffice.

# GARDEN PEAS

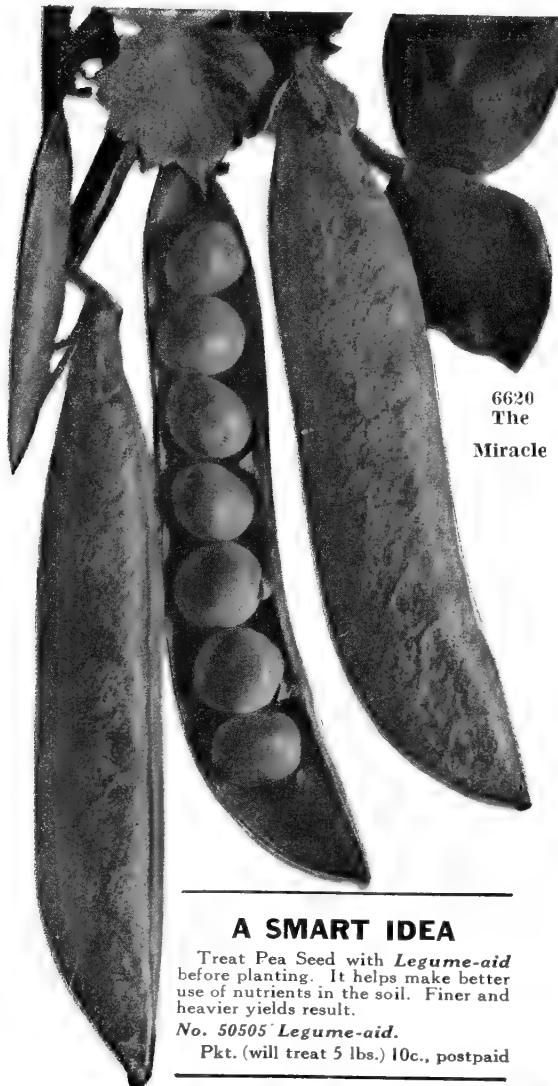

**Time to Plant**—Just as early in the Spring as the soil is workable (about April 1).

**Soil Preparation**—Any good garden soil which has been deeply spaded and liberally manured. Peas dislike acid soil and if such a condition exists, it should be corrected by working in lime (about 5 lbs. to each 100 square feet).

**Planting**—Sow in drills, allowing one inch between seeds and about 3 feet between rows. Cover the seed with about one inch of soil.

**Cultivation**—As soon as they begin to grow, some form of support should be provided for all but the very dwarf varieties. (Birch brush or poultry wire.) Constant cultivation will add considerably to the quality of the crop.

1 lb. of seed will sow about a 50 foot row

Green Mountain Potatoes

## Certified Potatoes

Aroostook Potatoes, certified as seed stock by the Maine Department of Agriculture.

Potatoes should be planted during April or early May. They will thrive in almost any fertile, well-drained, somewhat acid soil. Do not use lime. The soil should be plowed or deeply dug over and furrows 6 inches deep and 2 $\frac{1}{2}$  to 3 feet apart, should be made. A commercial fertilizer with high phosphorus and potash content should be thoroughly mixed with the soil at the bottom of the furrow (about 20 lbs. per 100 ft. row) and about 2 inches of unfertilized topsoil should be placed over it. Cut each Potato into three or more pieces with at least one good eye to the piece. Treat with Semesan-Bel and plant, about 10 inches apart, in the prepared furrows. Cover with 3 or 4 inches of soil. Cultivate constantly throughout the season. (10 bushels are sufficient to plant one acre)

7043 New Zealand Spinach

# Spinach

**Time to Sow**—For an early crop seed should be sown just as soon as the ground can be worked (about April 1) with successive sowings up to the end of May. This crop runs quickly to seed in hot, dry weather and therefore it is best not to plant again until about August 15 when a Fall crop of Spinach can be sown which will provide greens until frost.

**Soil Preparation**—Spinach, to be succulent and tender must have a really rich soil, well prepared and liberally manured.

**Planting**—Sow the seed thinly in rows; cover with not over  $\frac{1}{2}$  inch of soil and allow  $1\frac{1}{2}$  feet between rows. When the plants are large enough to handle, thin out, leaving about one inch between plants.

1 ounce of seed should sow a 50-foot row

The plants are robust, of low spreading habit, extremely drought resistant and produce an abundance of small, thick, tender leaves. As this is not a true Spinach, the culture is somewhat different. The seeds may be sown from May 1 to July 1 and should be soaked in warm water a few hours before planting. Sow at a depth of  $\frac{1}{2}$  inch and thin out to stand 2 feet apart. Pkt. 10c.,  $\frac{1}{2}$  oz. 30c., oz. 50c.,  $\frac{1}{4}$  lb. \$1.50

# Squash

There are two distinct types, the Summer or bush type and Winter or vine type.

**Time to Plant**—Sow the seeds of Summer Squash from May 1 to July 1 and Winter Squash from May 1 to June 1.

**Soil Preparation**—Prepare the hills by spading in two or three shovelfuls of well-rotted manure to each hill. If this is not available, work in about a handful of commercial fertilizer to each hill.

**Planting**—It is best to sow from 6 to 8 seeds in each hill about  $\frac{1}{2}$  inch deep. When these are well up, thin out, leaving only 2 or 3 of the strongest plants to grow in each hill. For Summer Squash allow about 4 feet each way between the hills and 7 feet each way for Winter varieties.

1 ounce Summer Squash will plant about 50 hills

1 ounce Winter Squash will plant about 15 hills

# TOMATOES

**Time to Sow**—It is best to sow indoors in flats, or in coldframes, during April, but seed sown outdoors in early May will produce fruit in September.

**Planting**—When sowing use a good light sifted loam and broadcast the seed thinly over the surface, cover with not more than  $\frac{1}{8}$  inch of soil. When the seedlings are from 2 to 3 inches high they should be given ample space for proper growth. Either transplant or thin out so that they will be about 3 inches apart. After all danger of frost is past these plants should be hardened off, by gradual exposure to the out-of-doors, during favorable weather; transplanting them to the garden about May 20th. Space the plants about 3 feet apart in the rows allowing 4 feet between rows. Closer planting is possible if the plants are to be staked.

# TURNIPS and RUTA-BAGAS

Turnips are easy to grow. They will thrive in the Spring or Fall but will not do well during the heat of Summer. Seeds may be sown as early as the ground is workable (about April 1) with successive sowings until May 15. The Fall crop should be sown in August. Any reasonably good garden soil will suffice.

Sow in rows,  $1\frac{1}{2}$  feet apart and cover the seed with not over  $\frac{1}{8}$  inch of soil. When the plants are about 3 inches high, thin them out to stand 3 inches apart. *These tender vitamin-rich plants should not be discarded, they make delicious greens.*

1 ounce of seed should sow a 150-foot row

**7314 Early Snowball.** 42 days. Very fine first-early variety, producing a small, globe-shaped root, free of all coarseness, and pure white. Recommended to the home gardener because of its superior quality.

Pkt. 10c., oz. 20c.,  $\frac{1}{4}$  lb. 60c.

**7335 Purple-Top White Globe.** 58 days. Round, handsome, of superior quality.

## RUTA-BAGAS

*An important Fall crop for the roots can be stored throughout the Winter.*

Seeds may be sown during April, but since they do not do well during hot weather, it is best not to make further plantings until after June 15, when an Autumn crop may be sown. Their cultural requirements are like Turnips except that they must be thinned to stand 6 inches apart.

1 ounce of seed should sow a 150-foot row

**7415 Improved American.** 90 days. Flesh yellow, solid, sweet, fine-flavored.

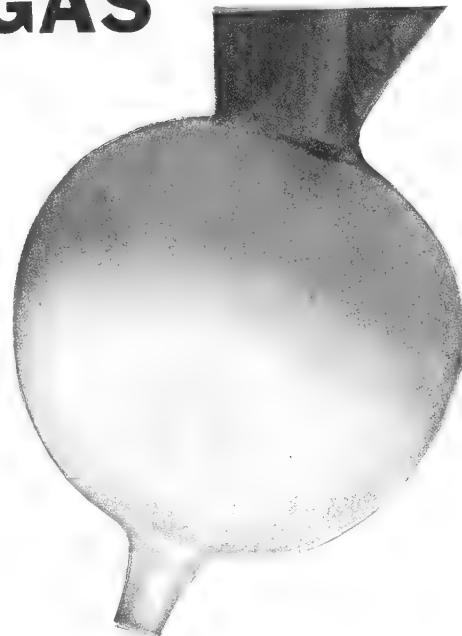

Pkt. 10c., oz. 25c.,  $\frac{1}{4}$  lb. 75c.

Pkt. 10c., oz. 25c.,  $\frac{1}{4}$  lb. 75c.

7335 Purple-Top White Globe

## TAMPALA

**7079 Tampala.** A delicious green vegetable which is cooked and served like Spinach. The entire plant may be used when it is 5 to 6 inches high or it may be allowed to develop and the individual leaves used. It should be sown outdoors from early May until Midsummer. Sow thinly in rows and cover the seed with not over  $\frac{1}{4}$  inch of soil. If plants are to be used when small, thin out to 2 inches apart; or 12 inches apart if they are to develop fully. Pkt. 15c.

## WATERMELONS

*Time to Sow*—Outdoors after the weather has become settled and warm (during June).

*Soil*—Light, well-drained soil that has been thoroughly manured.

*Planting*—Melons should be sown in hills spaced about 8 feet apart, each way. Sow 5 to 10 seeds in each hill and cover with not more than one inch of soil. When well started thin out so that 3 or 4 of the strongest plants remain in each hill.

1 ounce of seed will plant about 30 hills

**6271 White Mountain.** 65 days. A superb new, very early Watermelon. Grows only 7 or 8 inches long—small enough to fit conveniently in the refrigerator—with delicious rich red flesh and practically no rind. The sweetest, juiciest Watermelon you have ever been tempted with. An ideal variety that merits a place in every home garden.

Pkts. only, 25c.

**6284 Harris' Earliest.** 80 days. This has long been the standard in New England. Fruits are broad, oval and weigh from 15 to 20 lbs. The rind is thin and tender and the flesh is bright red, sweet and of good quality. Pkt. 10c., oz. 20c.,  $\frac{1}{4}$  lb. 60c.

**6288 Citron.** 90 days. This small, round Melon is inedible in the raw state but is highly recommended for preserving. The skin is alternately striped light and dark green and is very hard; the flesh is white and very firm. Pkt. 10c., oz. 20c.,  $\frac{1}{4}$  lb. 60c.

When these strong healthy well rooted plants are set out in the garden they will keep right on growing without set-back. Those offered for Spring sale were potted in the Fall. Wintered in frames and if planted early, will produce some berries on the June bearing varieties and a substantial Fall crop on the Everbearers, the first season. Plants set out in the late Summer will bear good crops the following year.

Hybrid Blueberries have become amazingly popular for home garden growing because the big, luscious berries are so superior. They make attractive shrubs and are very easily grown if the soil is acid and the drainage good. They need only be planted carefully and several varieties should be planted together to insure cross-pollination.

At least 3 varieties (of our choice) will be included in each order. We cannot accept orders for less than 6 plants at these low prices.

# Selected Fruits

2. In Greater Boston and certain surrounding communities (as indicated on map on page 79), delivery is prepaid on ALL SHIPMENTS OF \$4 OR OVER, exclusive of living plants, whether or not the items are priced as "prepaid."
